

Hector Ramirez Rios

New York, NY | (646) 821-0191 | hectorgundam@gmail.com | [LinkedIn](#) | [GitHub](#)

Summary

CompTIA Security+ certified candidate with experience across IT systems and operations, applying security, risk, and compliance concepts in regulated environments. Combines technical troubleshooting and application development with strong documentation, efficient issue resolution, and cross-team coordination to support secure, reliable systems. Open to remote or NYC-based opportunities.

EDUCATION

Inter American University of Puerto Rico

B.S., Computer Science (GPA: 3.72)

Jan 2022 - Jul 2026

Aguadilla, Puerto Rico

- **Achievements:** Dean's List
- **Coursework:** Data Structures and Algorithms, Organization and Computer Architectures, Intro to Java, Intermediate Java, Object-Oriented Programming, Intro to Databases, Web Program with Databases, Discreet Computational Structures I, Discreet Computational Structures II, Databases I, Web Page Development, Logical Programming, Operating Systems, Visual Computing, Teleprocessing and Networks, Software Engineering, Mobile Computing, Programming Language Portfolio

SKILLS

- **Cybersecurity:** Risk Management, Vulnerability Awareness, Data Protection, Access Control, Network Security, Incident Response, Threat Detection and Monitoring, Security Operations, Vulnerability Management, Compliance and Security Standards
- **IT / Support:** Troubleshooting, Technical Support, Issue Resolution, System Monitoring (Basic), Excel (Tracking, Documentation), Issue Tracking
- **Tools:** GIT, Visual Studio, MySQL, MongoDB, Django, React, PowerBI, Bootstrap, Figma, SaaS Platforms
- **Programming & Development:** Python, Java, SQL, HTML, CSS, C, C++, C#, PHP, JavaScript, Backend Development, Data Processing
- **Concepts & Methodologies:** Software Documentation, Software Development Lifecycle (SDLC), Agile Methodology (Scrum), Object-Oriented Programming (OOP), Risk Assessment

PROFESSIONAL EXPERIENCE

Microsoft | *Technologist Intern*

Jun 2024 - Aug 2024

- Selected as 1 of 70 from 2000+ applicants to participate in The New Technologists Innovation Academy at Cyborg Mobile & Microsoft, a 7-week paid program focused on product development, design, and software engineering
- Developed a location-based web application with React.js, React Bootstrap, Firebase, and Maps API, managed troubleshooting, documentation, and security decisions, and delivered a tool that enabled users to search and view points of interest on an interactive map
- Followed the entire product management lifecycle, including ideation, design, user interviews, research, prototyping, user testing, UI/UX, and full development, resulting in a fully functional application
- Participated in professional development seminars on emerging trends such as Data Science, AI, ML, Azure, databases, and Maps API, expanding my knowledge base and applying new insights to project work
- Attended deep-dive workshops on Azure, Responsible AI, and machine learning pipelines, gaining exposure to ethical AI development practices
- Collaborated with cross-functional teams to develop Software Requirements Specifications (SRS) and risk documentation using Confluence and Excel, enabling accurate tracking of system requirements, issues, and security considerations, which improved documentation consistency and reduced requirement gaps
- Conducted peer code reviews in GitHub and led UI/UX feedback sessions with Figma, performing vulnerability assessment to identify and fix critical issues that improved application stability and usability
- Participated in product pitch presentations to Microsoft executives using PowerPoint, clearly outlining the app's value, architecture, and scalability, which secured executive endorsement for further development

iTalent Digital | *Software Engineer Support Intern*

Feb 2022 - Jul 2023

- Developed and optimized Java and C++ code for the company's data analytics and CRM software, enhancing features for data visualization, processing, and decision-making
- Conducted functional and security testing with JUnit and static-analysis tools, documented defects in Confluence, and helped resolve compliance issues, strengthening the application's audit readiness
- Maintained and updated documentation and knowledge base to support troubleshooting, security awareness, and audit processes
- Provided back-end ticket support for the software's platform, resolving access control issues promptly to optimize user experience
- Developed and executed unit and regression test cases for backend modules, ensuring data protection compliance and improving code reliability while reducing bugs in production
- Collaborated with product managers and UX designers using JIRA and user stories to refine requirements and implementation plans, reducing rework and improving alignment with product goals

National Debt Relief | *Banking Operations Project Manager*

Oct 2018 - Feb 2022

- Implemented FDICPA procedures and risk management protocols within banking operations, strengthening compliance and customer protections
- Coordinated with HR, Legal, IT, stakeholders, and external partners through regular cross-functional meetings and Excel tracking to align processes, which enabled smoother implementation and reduced project delays
- Managed project schedules and workflows, improving efficiency and delivery timelines
- Implemented Agile Methodologies, facilitating communication and collaboration with upper management, stakeholders, external creditors, attorneys, and internal departments to address issues and streamline projects
- Documented and refined payroll and compliance processes, ensuring adherence to federal and state regulations
- Identified process and workforce data gaps in collaboration with business analysts and implemented audit procedures, improving data integrity by over 30% and strengthening compliance and risk controls
- Led cross-functional meetings to gather requirements and improve internal tracking tools, increasing processing speed and data accuracy
- Tracked issues in JIRA and maintained compliance documentation, contributing to a successful audit with zero critical findings
- Aligned teams with regulatory, security, and audit requirements using SaaS compliance tools and threat detection checks, strengthening control effectiveness and driving a clean audit with zero critical findings

CERTIFICATIONS

- CompTIA Security+ (SY0-701): Issued Jan 2026 | Expires Jan 2029
